Pinelands Protection Act

There are two significant areas in the Pinelands Natural Reserve.

New Jersey Pinelands

Especially important habitats appear to be bog-iron deposits found adjacent to slow-moving streams. Firstech Environmental personnel use their experience with the Pinelands application process to rapidly move the process through the governing bodies. Pine barren shrub swamps are dominated by leatherleaf, often associated with highbush blueberry or inkberry and growing on Sphagnum mats.

The Impact of Regional Land

Increased development of the Pinelands region would degrade water quality, increase turbidity, alter hydrology, and increase discharges of pesticides or hazardous materials into the rivers or ponds, to the detriment of aquatic species. The two largest Pinelands sites are the East Plains to the south of the Oswego River, and the West Plains to the north of the Oswego River.

New Jersey Pinelands

Part of the Act is the development of the Pinelands Comprehensive Management Plan PCMP. Florio considered the Forsythe-Hughes plan too uncoordinated. The Atsion burn area is an 809-hectare 2,000-acre site that burned in 1984, leaving bare sand exposed in many areas.

New Jersey Pinelands

It should be protected and managed to the greatest extent possible to ensure the perpetuation of its unique natural communities and rare species, many of which are simply not found, or are not as well-developed or in such concentrations, elsewhere in the region or the world. All municipalities are required by law to conform their local master plans and zoning ordinances to the regional plan. Environmental protection is overlapped by the State Pinelands Area, the Pinelands National Reserve, and the New Jersey Pinelands Biosphere Reserve United Nations Educational, Scientific

and Cultural Organization.

New Jersey Pinelands Building Permits

Sensitive joint vetch is at the northern end of its range in the New Jersey Pinelands.

Off

The Nature Conservancy owns Hirst Ponds Preserve. Species that are widespread in the Pinelands streams are American eel *Anguilla rostrata* , eastern mudminnow *Umbra pygmaea* , redfin pickerel *Esox americanus* , chain pickerel *Esox niger* , creek chubsucker *Erimyzon oblongus* , tadpole madtom *Noturus gyrinus* , bluespotted sunfish *Enneacanthus gloriosus* , and tessellated darter *Etheostoma olmstedi*.

Pinelands Protection Act

©PPA Adopted by the Pinelands Commission in 1980, the implements these statutes. NJ Spotlight News exists in part thanks to generous foundation support, including our founding funders the Community Foundation of New Jersey, the John S. This is the northern end of the range for Pickering's morning-glory, and the southern end of the range for the regionally rare curly grass fern, which prefers Sphagnum hummocks under Atlantic white cedar trees.
