In this study, variables have selected, ailments for which the patients were hospitalized during the last 365 days preceding the date of survey.

Bishnoi

Older age people were less likely to be ailing 15 days before the survey, but they were 18 times more likely to be hospitalized during 365 days

before the survey than children. Gender attitudes of young married people and especially in tribal groups were biased against women when it comes to planning for the first child. Abstract Fertility has declined in India during the last few decades because of socio-economic development.

Improving Health Services for Tribal Populations

It is observed that 78% of the ladies get pregnant at the age of 17-18.
