Measuring Boltzmann's constant through holographic video microscopy of a single colloidal sphere

Together these analyses showed that trajectories identified by CellRouter are robust to subpopulation structure and subsampling, and also outperform the previously described algorithms by all of these metrics.

This is evidence of a nearly undilute core. This finding is consistent with the results based on numerical simulations.

## Tornadoes and Tornadogenesis

Acoustically actuated sessile bubbles can be used as a tool to manipulate microparticles, vesicles, and cells. To the authors' knowledge, however, there have been few observational studies that tested the hypotheses advanced by these simulations.

And since these two components of motion can and must be discussed separately,

We used 12,281 genes for trajectory analysis and GRN reconstruction.
