## Divided Legacy: A History of the Schism in Medical Thought

From this my colleagues in the medical history fraternity have mistakenly concluded that Wright himself did not get good results and that therapeutic vaccination was all a myth. He has authored 10 books, including , , , and the best-selling.

And the Empirical doctrine tends always to individualization of treatment, whereas the Rationalist doctrine invariably views the individual patient as a member of a disease group, class, or entity and veers away from individualization. Von Behring recognized this relationship and was not loath to pay compliments to Hahnemann and the homeopathic school, even though this made his professorial life difficult at times.

This is found on the wide scale, as in the nineteenth-century conflict between homeopathy and allopathy, and more narrowly — within allopathy and within homeopathy, also within chiropractic and within osteopathy. Denying vitalism, they espoused a determinist and reductionist view of the body, seeing its material structure as determining its possible modes of behavior in sickness and health.

But in one major respect they have not followed the homeopathic procedure: no effort is made to individualize. I was curious why they were so dismissive of homeopathy, and that is what got me started on a lifetime research project. This led to a reaction in the 1820s with the emergence and rise of botanical medicine, and, in the 1830s, with the spread of homeopathy.
