The non-equilibrium entropies and their relation to properties of attractors are discussed for several examples taken from physical and non-physical self-organization processes. See Hentschel, 1996, Appendix A. Furthermore, also in 1933, Stark, President of the PTR , ran for president of the DPG against Karl Mey, the industrial physicist and head of

These policies had significant effects on physics in Germany through significant qualitative and quantitative losses of physicists as a result of emigration and through political decisions overriding those based on academic and scientific considerations; 25% of the physicists holding academic positions in the period 1932—1933 were lost due to the policies. The articles published here have gone through a strict peer review in line with the stringent scientific quality standards propounded by the New Journal of Physics.
