International Monetary Fund - [PDF] Democracy and the "Washington consensus"

"Washington Consensus"

- The "Washington Consensus," a term coined by John Williamson, is intended to represent the policy advice offered by the World Bank, IMF, and US government (all located in Washington, DC.)
- The "Washington Consensus" is closely associated with the market-led theory of economic development.
- Hence the "Washington Consensus" emphasizes
  - Private property rights
  - Market prices (including interest rates)
  - Economic openness
    - (free trade and openness to direct foreign investment)
  - Macroeconomic stability
- Critics charge that the "Washington Consensus" ignores the active state role in the most successful late developing countries.
