The contribution from this formation was previously unrecognized, and the revised hydrogeological conceptual model presented here identifies both the overlooked Permian aquifer and other deep fluid sources as providing groundwater discharge to Dalhousie, in addition to previously accepted contributions. Merkel initiated in 1995 the International Conference on Uranium Mining and Hydrogeology UMH , which was held for seven times in Freiberg. The determination of different subunit hydrochemistry has clear local applicability for more finely stratified hydrogeological modelling within the studied 10 km 2 or so area of the Surat Basin.
