### Why you don't want a copper and silver mokume gane ring.

With Krikawa's labor intensive trademark patterning, the gorgeous grain of the metal is revealed in intricate lines, waves, and eddies. Historically, a paste of ground radish was also used to prepare the work for the patina. The early components were relatively soft metals and alloys gold, copper, silver, , , and which would form liquid phase bonds with one another without completely melting.

. At this time, Japanese sword making was the highest art form in the country, and mokume-gane was developed to decorate the hilt of the sword. Is it be possible to make a piece of jewelry so that the copper would corrode but the noble metal would still be wearable, or does everything fall apart once the copper goes? Maybe in a way where you would let the coper etch for 5 days, and then use a dissolving solution to clear out the remaining coper? When exposed to the electrolyte the anode will dissolve and supply ions to the electrolyte.
