17.5: Kinetics of Reactions in Solution

The reaction is written R11 and the rate of reaction is calculated as 9. Secondly, the water molecules form a solvation shell around the ions lower left , rendering them energetically thermodynamically more stable than they were in the NaCl solid.

17.5: Kinetics of Reactions in Solution

Reactions of Ozone with Unsaturated Organic Compounds. Tetrahedron 2014, 70 13 , 2280-2285. If we wish to emphasize the reversible nature of a reaction then we need to write it as a two-way reaction, R10 Eventually, steady state is reached between the forward and reverse reactions: 9.
