TRINDERS' FINE TOOLS

We have just been describing the leading cases occurring in building upon a natural bottom; we now come to the reconsideration of these cases, with the superadded difficulty of their occurring under water.

The Eden of labor: or, The Christian utopia./ By T. Wharton Collens ...

That the average number of calls or cases of a lawywyer, doctor, or other one whose service is rendered to private persons individually, should beascertaiiied by statistics; and each distinct individual or corporation who receives the benefit of a call or attention to a particular case, should on his certificate be charged with its appropriate labor-time, and that time be credited to the servitor. In the section of a piece of wood attacked by dry rot a microscope reveals minute white threads spreading and ramifying throughout its substance; these interlace and become matted together into a white cottony texture, resembling lint, which effuses itself over the surface of the timber; then in the centre of each considerable mass a gelatinous substance forms, which becomes gradually of a yellow, tawny hue, and a wrinkled, sinuated porous consistence, shedding a red powder the spores upon a white down; this is the resupinate pileus, the hymenium being upwards, of Merilius lachrymans, in its perfect and matured state.
