Cattle Feeding and Nutrition

Antibiotics are used in the cattle industry for therapeutic purposes in the clinical treatment of infections and for disease prevention by controlling the growth of potentially harmful bacteria. Reference to commercial products or trade names does not imply endorsement by MSU Extension or bias against those not mentioned.

Cattle Feeding... the Grass

The types of winters and summers you get, length of grazing season which translates into length of feeding period , average ambient temperature, and other environmental factors should influence what you can feed your cattle and how much they're even expected to eat. Flies hatching from manure pads are always many days behind the cattle in the grazing rotation.
