## Perspectives in Molecular Toxinology

Are toxins subject to accelerated evolution? Complete answers may not always be readily apparent, but the attendant reasoning shows how toxinology has become an important area of biochemistry, directly associated with advances in cellular microbiology, molecular pharmacology, molecular physiology, cell biology, protein engineering, and other disciplines.

## Molecular approaches in toxicology: change in perspective

UFP deposit in the nose from where they may translocate to the brain through the olfactory bulb, inducing oxidative stress and inflammation in neural and glial cells. Can they be exploited as models for the design of new drugs? ACR Publication Date: 1975-01-01 Research Org. Bronchoalveolar lavage indicated some changes in cellularity of BAL fluid in response to the POS and PONS scenarios; these responses were considered toxicologically mild in magnitude.

## A Chemical Perspective of Pharmacology and Toxicology

Influence of seasonality, air mass origin and particulate matter chemical composition on airborne bacterial community structure in the Po Valley, Italy.
