. The premise of Creston Mapes' new book - a senseless mass shooting - is one that's happening in real life much too often these days.

The doctor's view of everything was a really interesting take on things. Stephen Fabels has a great turn of phrase and sees the absurd in many of the situations that he finds himself in. Part travel memoir, part journey within, this book was a rich experience.

Signs of Life: To the Ends of the Earth with a Doctor by Stephen Fabels

. Well, he also spent six years of the past decade cycling six continents so, all bar Antarctica. His descriptions are often very observant and witty.

Signs of Life

It is a curiosity- driven exploration of humanity, cultures and eventually of just human bodies and minds.

It is clear that Fabels prepared for this venture, as far as possible - and living frugally with little income, if any, would have been essential. Of more pressing concern were the daily challenges of life as an unfit rider on an oar. They say that being a good doctor boils down to just four things: Shut up, listen, know something, care. My preference is suspense that doesn't have much if any romance.

Signs of Life

I particularly enjoyed the accounts of the TB sanatorium and the jungle in Calais. Although Fabels dwells on themes such as the nature of connections between humans, and the politics of global health, this is essentially a well-written and often humorous travel memoir. Six years navigating the world on a bike.

Signs of Life (1968)

. When Stephen Fabes left his job as a junior doctor and set out to cycle around the world, frontline medicine quickly faded from his mind. Quite honestly, the book was hard to put down.

The writing is intelligent and engaging.
