knowledge(s) (Volume 18)

Featured indicators include the percentage of married women using modern and traditional family planning methods, unmet need for family planning, use of modern contraception by wealth group, and demand for family planning satisfied by modern methods.

Assessment of Family Planning Service Availability and Readiness in 10 African Countries

When a person is able to continue use of their contraceptive method for the duration of their time in need, it may be an indication that the health system has met their need for family planning care. Ethics approval and consent to participate The study was commission by UNHCR-Geneva, with local approval granted by the UNHCR country offices. While the client-centric contraceptive services continue to be the focus of the FP program, study results also highlight the differences in usual response about the receipt of method choice and whether women received information while making a mention of receipt of method choice or not.

Family planning

Finally, as the bi-variate results may mislead conclusions due to confounding from other factors, we use multivariate analysis to explain the net effects of various background characteristics on outcomes of interest. About three-fifths 57% of the clients had three or more children. We have added a brief link to the rights-based approach to FP service provision to the discussion.

Tanzania

But, as my shows, Magufuli is not the only world leader questioning longstanding population control policies. Ketende C, Gupta N, Bessinger R: Facility-level reproductive health interventions and contraceptive use in Uganda. Available from: Berghella V, Buchanan E, Pereira L, et al.
