### Assess, Plan, and Protect Source Water

Exposure Aluminum is a metal widely distributed in nature. In conjunction with existing treaties made between the government and different First Nations, the act established which tracts of land would be for First Nations people so that settlers could set up farms. Table 3 Footnote c Key factor in determining whether or not study would be considered for use as a potential key study Despite the wealth of research available on aluminum toxicity, many studies including some of those listed in Table 3 have common limitations, such as the failure to quantify aluminum in the base diet of the study.

### In the Neskantaga First Nation, undrinkable water is a crisis of health and faith

Nova Scotia's drinking water program consists of both public and private supplies. The use of alternative iron-based coagulants to minimize residual aluminum concentrations should be considered with caution, as iron is reported to add to adverse health effects Rao and Adlard, 2018. It causes flu-like symptoms, but it does not cause pneumonia.

### Freshwater Canada's Dirty Water Secret

The HBV is based on the latest science, and in particular on rigorous studies that were not available for the calculation of previous HBVs e. Evacuations separate families and friends. Research has shown that a headache is one of the most common symptoms of dehydration.

### Is Fluoride in Water Safe? A New Study Reignites the Debate

Aluminum neurotoxicity in preterm infants receiving intravenous-feeding solutions. New Zealand Ministry of Health 2008.
