All attitudes, other than the normal attitude, can lead to a more intense and prolonged labor. You will be providing nursing care prior to, during and after electroconvulsive therapy for your client who is severely depressed. Correct Response: C You should teach the client about the proper length of a cane.

**On rest and pain: a course of lectures on the influence of mechanical and physiological rest in the treatment of accidents and surgical diseases, and the diagnostic value of pain : Hilton, John, 1804**

Indwelling urinary catheters are invasive but restraints are not invasive; indwelling urinary catheters can lead to infection but restraints do not. Finally, the data in this question does not indicate that the client is constipated and in need of a laxative.

**Wood's Library Standard Medical Authors**

This understanding often varies from person to person and this personal understanding may or may not be accurate, clear or objective, and not a clear and objective understanding of the nature of the conflict and factors that have led to it; resolution is a phase of conflict resolution, not a type of conflict, that is characterized when the contending parties are able to come to some agreement using mediation, negotiation or another method; an Avoidance-Avoidance conflict is a type of conflict and not a phase of conflict, that occurs when there are NO alternatives that are acceptable to any the contending parties; Approach- Approach conflicts occur when the people involved in the conflict want more than one alternative or action that could resolve the conflict; and lastly, Double Approach - Avoidance is a type of conflict and not a stage of conflict that occurs when the people involved in the conflict are forced to choose among alternatives and actions, all of which have BOTH positive and negative aspects to them. Inspection is typically the first step and percussion of the abdomen should be done prior to any palpation, particularly deep palpation.
