India's Trilemma: Balancing energy security, access & sustainability

The IEA welcomes the reforms proposed by the Central Energy Regulatory Commission CERC and progress made towards improved real-time markets. India, one of the fastest growing major economies, is also the fastest growing energy consumer in the world.

Govt committed towards eco

India is being pragmatic about its energy use, looking for alternatives but not sacrificing energy consumption that's vital for a growing economy.

India's Quest for Energy Security

This was noticeable in the two Gulf of Oman incidents in 2019, where Iran was blamed but could not be conclusively proven to have been responsible and hence accountable for the attack on four commercial ships and two oil tankers, through the alleged use of limpet mines. However, given the expected growth in oil consumption, the same volume may cover only four days of net imports in 2040. It is also promoting affordable battery storage.

India's energy security challenge

This situation is further complicated by the presence of the ISIS and Al-Qaeda, who control and influence large sections of territory in Yemen, and are engaged in offensive action against both parties to the conflict. Key to this success will be building a joint vision and a common reform roadmap among a broad range of central government agencies, state authorities, system operators and utilities. But even the renewable energy sources are not free from the competitive geopolitical environment.

India's Trilemma: Balancing energy security, access & sustainability

An efficient coal sector is critically important not only for electricity generation, but also for industrial development in areas such as steel, cement and fertilisers.

ASSESSING INDIA's "SECURITY

India-Chian energy geo-politics is also reflected in renewable energy space. India is making energy security a priority India has made important progress towards meeting the United Nations Sustainable Development Goals, notably Goal 7 on delivering energy access.
