Difference between Pulsar and Quasar

Space Daily, 27 July 2006. This low magnetic field is less effective at slowing the pulsar's rotation, so millisecond pulsars live for billions of years, making them the oldest known pulsars.

What is the difference between a quasar and a pulsar?

These stars are the products of the explosive transformation of a massive star. Longair, High energy astrophysics, Volume 2. Sometimes, a star can try its hardest to become a black hole and even explode in a supernova to collapse its mass.

What is the difference between a quasar and a pulsar?

Navigation via naturally occurring signals of opportunity, such as those produced by pulsars, quasars, and gamma-ray bursts, is proposed as an alternative navigation technique that could augment or eventually replace navigation via the DSN. Many things have changed since the date of publication; however, the layperson will not be disappointed due to the well-thought out way the book was written. So powerful, in fact, that if you were to drop a marshmallow on the star, it would hit with an impact of a thousand nuclear bombs.

Quasars vs Pulsars

Evidence appears to suggest that pulsars are rotating with very precise periods, and they are now believed to be rotating stars that emit a narrow beam of radio waves.
