The latter spoke disdainfully of the poor quality of French mathematicians and challenged the king with a problem posed by Adriaen van Roomen, professor of and medicine at the University of Leuven Belgium, to solve a certain algebraic equation of degree 45. The Egyptians, on the other hand, used a primitive form of trigonometry for building in the 2nd millennium BC. It analyses the of the catastrophe geometries.

The method of was first suggested in 1533 by the Dutch mathematician 1508—55 : one chooses a base of known length, and from its endpoints the angles of sight to a remote object are measured. Each chapter concludes with a summary and a set of practice problems in addition to problems at the end of each section of the text.
