波纹管刚度计算

For the heat transfer analysis Φ c2 0.

multiphase flow dynamics

. The modeling of the separators can happen at different level of complexity: use of experimental characteristics inside the control volumes and transmitting of the separated liquid and gas in other volumes; use in the same way analytically derived characteristics as described in Chap. Analysis for real reactors is a complicated subject of the reactor physics that will not be touched here.

Mook, Virginia Polytechnic Institute and State University, Blacksburg, VA, 1982. The fine separation then has to happen in a special device.

In this case the inlet acceleration is neglected. Mook , Pergamon Press, Oxford, 1990 A special issue of the J.

I will limit my attention in this work to the scientific part. Look-up table for critical heat flux: There are more the 400 empirical correlations and methods for prediction of the critical heat flux in pipes and rod bundles.

Desu, Virginia Polytechnic Institute and State University, June 1993. In summary, the void prediction for AREVA NP bundle test is with uncertainty of 4.
