Sherlock fosters reuse practices through the production of reusable assets and frameworks and general domain architectures. State-of-the-art computing resources are available to all students, who will be mentored by agency experts, collaborate to solve challenging problems, and present their work in both technical talks and papers, to be published internally at NSA. Sherlock uses an UML like structure for the design and the construction of domain models.

Course Pathways

We work with MetaStock as a partner and have a special offer for our readers. They will be required to perform basic administrative tasks - type, file, maintain records, answer phones and operate business equipment such as word processors and personal computers. Overall, was the material presented too elementary? These theoretical and applied areas require cross-disciplinary tools and methods for their solution.
