Computer Network

Lesson Summary In this lesson, we learned that the client-server model is very efficient for ease of management. The client uses the network as a way to connect with and speak to the server. While centralized computing may make use of the client server model, they are not exactly the same thing.

Client Server Computing

The server can make a request from the client as well. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, sexual orientation, gender identity, national origin, disability, or veteran status, or any other protected class. Uses of other technology, such as smart sensors or satellites to prevent and assess damage or reduce costs, will continue to increase.

Difference between Client

Some insurance companies are also exploring ways to make the premium breakup more transparent to the customer as a way to ensure loyalty. Voice recordings from agents and customers can also be used to enhance the overall customer experience and improve service.

Computer Network

Technology strategy 8: Use of drones, sensors, satellite imagery, and Augmented Reality AR and Virtual Reality VR Many of the processes that are typically done in person, such as user and employee education, coverage decisions, and damage prevention are being simplified with technology, creating a more immersive, accurate, and cost-effective experience for insurance companies.
